

The power of technology addressing patient's anxiety

Muriel Dulière, HEPN Belgium

Technological innovations can expand and complement conventional medical protocol. In this context of blended therapies, the **IT4Anxiety** project is a collaboration between start-ups, mental health professionals and users, but also universities, research centres, higher education establishments and public authorities.

Based on the conclusions of our study identifying needs of users and evaluating innovation solutions already implemented in the care process, hackathons are organized in several countries to engage stakeholders in the creation of innovative solutions (Netherlands, Germany, France, Belgium and UK).

15 selected start-ups will be supported in order to guarantee the effective implementation of these innovations.

To facilitate the introduction of e-solutions in health establishments, the Belgian University of Applied Science, Haute Ecole de la Province de Namur (**HEPN**) organizes trainings for health professionals and futures health professionals.

Start-up or health actor, a unique opportunity to join our consortium or meet our partners!
